

# Measuring Before Ordering Guide

Please use this guide to ensure that your chosen piece of nature will fit into the desired space and the access route can accommodate this. It's helpful to consider your surrounding area and account for anything that can't be moved. Often, it might be helpful to lay masking tape in the outline of your item to ensure a perfect fit.

## 1. Doorways

Measure from the inside of your door frames. Be careful to note how wide your doors can open and accommodate for doorknobs and handles. If the doors can be removed, this may be a good idea to prevent damages. Always try and choose the doors that might offer the most generous space.

## 2. Stairways

Measure the width of your stairway (taking account if you have a handrail or post), and the height from the top and bottom steps to the ceiling. Be sure to look out for any sloped or curved surfaces. If your stair case has a landing, make sure your item can fit on and around it, both width and height.

## 3. Obstacles

Account for any low-hanging ceiling lamps or fans, breakable decorations that cannot be removed, stairway bannisters or turns, or angled ceilings or walls.

Be sure it is possible to completely clear a path for your item to reach its final destination.

#### 4. Hallways

Be sure that every hallway on route to your final destination has enough room to accommodate your item, especially if you anticipate any twists or turns you may have to make. Measure the height, width and depth, making sure the shortest measurement of your furniture is less than the width of your hallway.

#### 5. Clear a Path

Plan your route and clear it out. Make sure you have a good plan on how to get your furniture to its final location. Planning ahead can save a lot of time and disappointment when your furniture arrives. Remember, the quickest route might not always be the easiest. Plan for all the twists and turns that it might need to take as it enters your home.

#### 6. Outside Area

Don't forget to measure the area around the entry point you plan to take your furniture in. Be aware of gates, porches, outdoor, and flower beds just to name a few. This always includes building lobbies and all paths to your apartment, loft or studio.
